History Of Crypto Currency

To many people, crypto currency might seem like something that emerged out of nowhere to become a huge force in both the technological world and the realm of personal finance. The digital coins have the potential to replace the current method by which we both pay for products or services and receive payment for those things. They also might someday be the impetus for individuals taking control over aspects of their lives that were once governed by middlemen and third parties.

People may not realize that crypto currency has some history behind it. Not a very long history, but it definitely had some major signposts and events that it had to experience before it could reach where it is today. At different points in its existence, crypto currency has seemed like both a sure thing that would be indispensable in the future and a scourge of society that only held value for those who were up to no good.
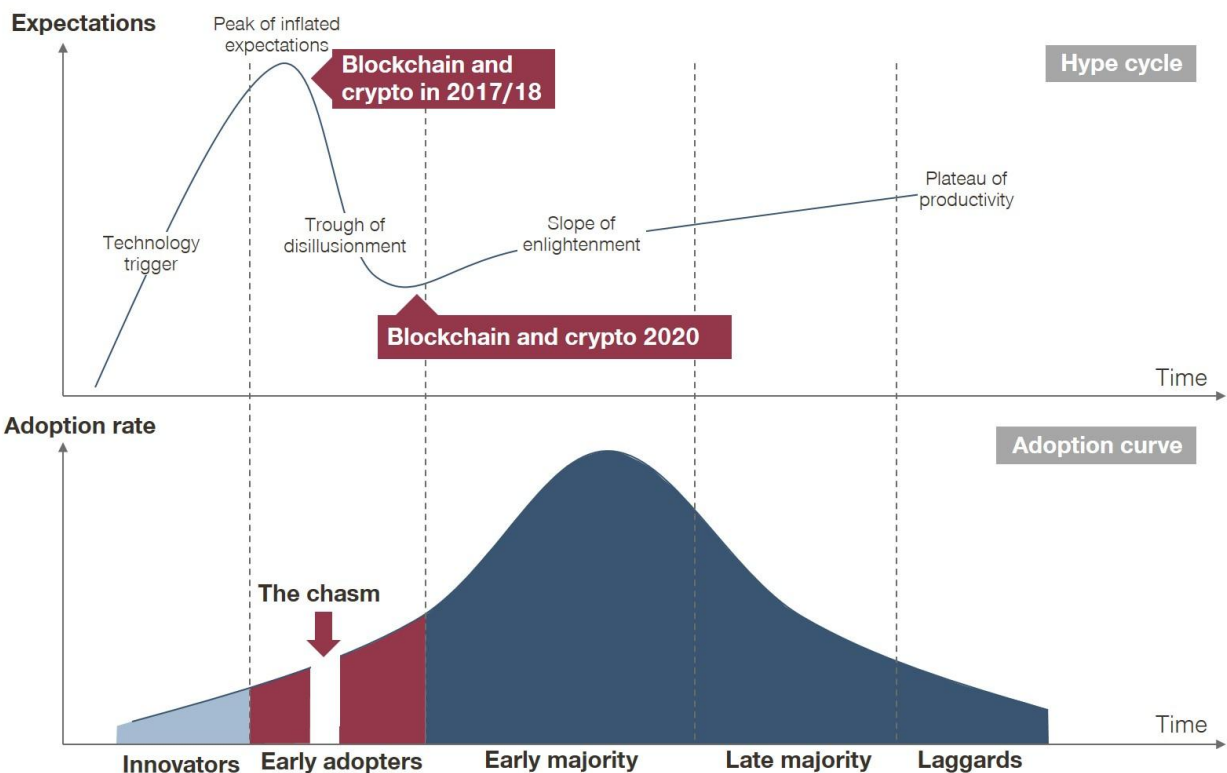

It is important to examine the history of anything that has the potential to shake up the world. Crypto currency certainly has that ability, which is really quite impressive for an innovation that is barely ten years old.
Crypto Currency Adoption

One of the things holding crypto currency back from rising to previous levels is the fact that not enough of the coins have actually been used in the situations for which they were intended. That means that Bitcoin isn't accepted by many places as payment, even though it gains more traction every day. And it also means that many of the second-generation coins have not yet delivered on the kind of game-changing innovations that they promised.

Many of the detractors of crypto currency point to this lack of usage as a sign of its weakness as an investment vehicle. Its proponents think otherwise, pointing to the steady progress the coins are making towards saturation on a widespread level

Earn a daily ROI on Investment, up to 1.5% from an Auto-Pool run by the best Trade philosophy and Platform in the world. We have 10 different packages you can choose from and start earnings

Stake

Stake your EUT, ETH, TRX, LTC, ETC, BNB, USDT, SOL, RVN, or DOGE coin and get a high rate of Annual percentage yield (APY) per month for your stake amount, up to 10 years.

What is Binance Coin (BNB) ?

Binance Coin is the crypto currency issued by Binance exchange and trades with the BNB symbol. As of June 2021, Binance Exchange is the largest crypto currency exchange in the world, supporting more than 1.4 million transactions per second.

Binance coin initially ran on the Ethereum blockchain with ERC 20 standard but has since become the native coin of the Binance chain. It was launched during an initial coin offering (ICO) in July 2017 and has a strict maximum of 200 million BNB tokens. It offered 10%, or 20 million, BNB tokens to angel investors, 40%, or 80 million, tokens to the founding team, and the remaining 50%, or 100 million, to the various participants through the ICO process.

Almost half the funds raised during the ICO process were intended to be used for Binance branding and marketing, while around one-third were used to build the Binance platform and perform necessary upgrades to the Binance ecosystem.BNB was initially based on the Ethereum network but is now the native currency of Binance's own blockchain, the Binance chain.

What is Ethereum Coin (ETH) ?

Ethereum is a platform powered by blockchain technology that is best known for its native crypto currency, called ether, or ETH, or simply Ethereum. The distributed nature of blockchain technology is what makes the Ethereum platform secure, and that security enables ETH to accrue value.

The Ethereum platform supports ether in addition to a network of decentralized apps, otherwise known as dApps. Smart contracts, which originated on the Ethereum platform, are a central component of how the platform operates. Much decentralized finance (DeFi) and other applications use smart contracts in conjunction with blockchain technology.

As a crypto currency, Ethereum is second in market value only to Bitcoin as of January 2022.

The Ethereum platform was founded with broad ambitions to leverage blockchain technology for many diverse applications. Bitcoin was designed strictly as a crypto currency.

What is Tron Coin (TRX) ?

TRON is a decentralized virtual machine that was built to help usher in the decentralized internet. Similarly to Ethereum, TRON enables Dapp developers to create and utilize complex protocols via smart contracts that live on its native blockchain Today the platform is best known for its transaction speeds and its lively CEO.

Specifically, the platform is capable of 2000 transactions per second. This performance puts TRX on par with major payment processors such as PayPal. Best of all, TRON has zero transaction fees. You can send a million dollars in TRX to anywhere in the world in seconds and never have to pay a fee.

To grasp the monumental task TRON's developers seek to take on, it's crucial to understand a little about the decentralized internet. The decentralized internet differs from the internet you are used to in some key ways. Primarily, there are no hosting companies. Instead, the entire internet is run by personal users.

Until recently, the concept of a decentralized web seemed impossible. The computing power of the world was not up to par yet. However, the transparent nature of blockchain networks makes them ideal for just such a task. This is exactly the role TRON seeks to obtain.

Roadmap

1 ESTABLISH THE PROJECT TEAM

Build a team of 10 talented persons, and great advisors

2 WEBSITE AND PANEL

Work on Eurot coin website and a Decentralized Control Panel for trade and functionality

3 WEBSITE LAUNCH

After the long work we publish Eurot coin website in public with all legal information

4 LEGAL DOCUMENTATION

To establish our HQ in England with an Administrative office in the USA, and prepare all legal documents.

5

DEVELOP TRON SMART CONTRACT

Developed innovative TRON smart contract to best practice specifications; developed back-end for multi-exchange trading

6

FINALIZE SMART CONTRACT

Developed innovative smart contract to best practice specifications; developed back-end for multi-exchange trading

MOBILE APP

7

Now is the time for mobile application to make the

usage and voting even easier

8

OWN PLATFORM

Develop an own platform for Smooth P2P operations with matchless transaction speed and security.

9

LONG TERM STAKING

Partnering to present long term stake programs with EUT, ETH, TRX, LTC, ETC, BNB, USDT, SOL, RVN, or DOGE coins

10

P2P TRANSFER SYSTEM

Transfer EUT Coin to other EUT address With very low transaction fee

11

INTEGRATION of ETH & BNB

To make Eurot the first Euro-based Stable Coin project to work in the Platforms of TRX, BNB, and own Developed Platform, at a Time.

12

LOTTO GAME

Launch Lottery game where user can win eut coins

13 · CLOUD MINING

A stunning platform to partner with us for a long-term residual income stream through cloud mining

14 · EXCHANGE COINSFLY

We will develop own exchange platform to exchange Eurot and other crypto currencies, the world's First EuroT based Crypto Exchange

15 · CRYPTO CURRENCY EUROT LISTING

We will list Eurot on in World's leading Centralized Crypto Exchange Platforms.

Conclusion

We believe in the blockchain technology and support the idea of crypto currency as mode of borderless payment medium. Eurot Coin is ready with various facilities to serve its community members as a functional coin for utilities payments. We welcome everyone who values the same to join us, we shall seed and nurture Eurot Coins together and enjoy the fruitful return in future.

We completely re-engineered our blockchain and based it on TRX —one of the most vibrant and rapidly evolving developer's communities in the blockcha In world. We revamped our business model, shifting it from placement fee to per- transaction fee, requiring participating merchants to pay commission only for the successful transactions which deliver revenue.
